CLAIMS

1. (Currently Amended) A method for providing a wireless device access to one or more information networks, the steps comprising:

providing user-dependent information for access to an information network, wherein access is provided through a <u>mobile communications</u> cellular-type provider;

initiating an information request in response to a user input;

determining whether the information request requires user-dependent information;

upon determining that the request requires user-dependent information, performing the substeps of:

retrieving the user-dependent information by at least one secure location server;
submitting the request with the user-dependent information to a service provider for retrieving the information;

receiving location dependent information by at least one secure location server; formatting <u>a</u> the response according to location dependent information; and presenting the response to the wireless device; [[.]]

upon determining that the request does not require user-dependent information, utilizing a alternative connection to the information network.

2. (Currently Amended) The method of Claim 1, wherein the user-dependent <u>information</u> data comprises logon information, account information, e-commerce information, and/or user preferences.

- 3. (Currently Amended) The method of Claim 1, wherein the user-dependent information data comprises the logon information, logon information comprising at least one of a group comprising a user id, a user password, and a user preference.
- 4. (Currently Amended) The method of Claim 1, wherein the user-dependent information data comprises the e-commerce information, e-commerce information comprising at least one of a user account, a user password, credit card information, shipping information, and address information.
- 5. (Original) The method of Claim 1, wherein the step of providing user-dependent information comprises at least one of capturing sign-up information, capturing logon information, and registering logon information.
- 6. (Currently Amended) The method of Claim 1, wherein <u>a</u> the key sequence comprises at least one of one or more keys, a selection key, and a mouse click.
- 7. (Original) The method of Claim 1, wherein the information request comprises at least one of selecting a shortcut, entering a URL translation, and invoking a servlet.
- 8. (Original) The method of Claim 1, wherein the step of determining whether the information request requires user-dependent information is performed by at least one of invoking a servlet with predefined user-dependent information, translating a shortcut and filtering the translated shortcut for user-dependent data, and retrieving for a URL translation and filtering the URL translation for user-dependent data.
- 9. (Currently Amended) A method for providing a wireless device access to information networks, the steps comprising:

storing user-dependent information for access to an information network, wherein access is provided through a <u>mobile communications</u> cellular-type provider; and

storing a key sequence as a translation for an information request, thereafter;

initiating an information request in response to a user input;

translating the key sequence to the information request for transmittal to a service provider;

determining whether the information request requires user-dependent information;

upon determining that the request requires user-dependent information, performing the substeps of:

retrieving the user-dependent information if required by the information request;
submitting the request with the user-dependent information to the service provider for retrieving the information;

receiving location dependent information by at least one secure location server; formatting <u>a</u> the response according to location dependent information; and presenting the response to the wireless device; [[.]]

upon determining that the request does not require user-dependent information, utilizing a alternative connection to the information network.

- 10. (Original) The method of Claim 9, wherein the step of storing user-dependent information is performed by at least one of a wireless device, a wireline device, or an application server.
- 11. (Original) The method of Claim 9, wherein the step of storing the key sequence is performed by at least one of a wireless device, a wireline device, or an application server.
- 12. (Original) The method of Claim 9, wherein the step of translating the key sequence is performed by at least one of a wireless device, a wireline device, or an application server.
- 13. (Original) The method of Claim 9, wherein the step of determining whether the information request requires user-dependent information is performed by at least one of a wireless device, a wireline device, or an application server.

- 14. (Original) The method of Claim 9, wherein the step of retrieving the user-dependent information is performed by at least one of a wireless device, a wireline device, or an application server.
- 15. (Original) The method of Claim 9, wherein the user-dependent information is stored on at least one of a wireless device, a wireline device, or an application server.
- 16. (Original) The method of Claim 9, wherein the key sequence is enabling determination of a user-defined shortcut, a system-defined shortcut, a URL, and a link.
- 17. (Original) The method of Claim 9, wherein the user-dependent information comprises logon information, account information, e-commerce information, and user preferences.
- 18. (Original) The method of Claim 9, wherein the user-dependent information comprises logon information, the logon information comprising at least one of a user id, a user password, and user preferences.
- 19. (Original) The method of Claim 9, wherein the user-dependent information comprises e-commerce information, the e-commerce information comprising at least one of a user account, a user password, credit card information, shipping information, and address information.
- 20. (Currently Amended) A method for allowing Internet cookies on a wireless device, the steps comprising:

storing cookie information on a mobile communications cellular-type terminal;

thereafter retrieving the cookie information from the <u>mobile communications</u> eellulartype terminal in response to a request from a <u>mobile communications</u> eellular-type terminal;

receiving <u>cookie</u> <u>location dependent</u> information by at least one secure <u>location</u> server; <u>determining whether the cookie information is location dependent;</u> upon determining that the request requires location dependent information, performing the substeps of:

formatting a response according to location dependent information; and transmitting the cookie information to <u>a</u> the service provider <u>through a location</u> <u>server;</u> [[.]]

upon determining that the request does not require location dependent information, transmitting the cookie information utilizing an alternative connection to the Internet.

- 21. (Original) The method of Claim 20, wherein the step of transmitting the cookie information to the service provider is performed via the Internet.
- 22. (Currently Amended) An apparatus for allowing Internet cookies on a wireless device, the <u>apparatus</u> steps comprising:

means for the wireless device to connect to a <u>mobile communications</u> cellular type terminal;

means for storing cookie information on the <u>mobile communications</u> cellular type terminal;

means for retrieving the cookie information from the <u>mobile communications</u> cellular type terminal;

means for determining whether the cookie information is location dependent;

means for receiving location dependent information by at least one location secure server;

means for formatting a the response according to location dependent information; and

means for transmitting the cookie information to a mobile communications cellular type service provider; [[.]]

alternative means for transmitting cookie information that is not location dependent.

23. (Currently Amended) A method for allowing a wireless device user to logon to a secure area of the Internet, the steps comprising:

providing user access information to a service platform, wherein access is at least provided through a <u>mobile communications</u> cellular type provider;

initiating an information request for secure information in response to a user input; detecting whether the information request requires user access information:

upon detecting that the information request requires user access information, performing the substeps of:

retrieving the user access information;

receiving location dependent information by at least one secure location server; formatting <u>a</u> the response according to location dependent information; and submitting the information request with the user logon information; [[.]]

upon detecting that the information request does not require user access information, utilizing an alternative connection to the Internet.

- 24. (Original) The method of Claim 23, wherein the user access information comprises logon information, the logon information comprising at least one of a user id, a user password, and user preferences.
- 25. (Original) The method of Claim 23, wherein the step of providing user access information comprises at least one of capturing sign-up information, capturing logon information, and registering logon information.
- 26. (Original) The method of Claim 23, wherein the step of detecting whether the information request requires user access information is performed by at least one of invoking a servlet with predefined user-dependent information, translating a shortcut and filtering the

translated shortcut for user-dependent data, and retrieving for a URL translation and filtering the URL translation for user-dependent data.

27. (Currently Amended) A computer program product for one-click data entry, the computer program product having a medium with a computer program embodied thereon, the computer program comprising:

computer program code wherein access is at least provided through a <u>mobile</u> communications cellular-type provider by said medium for enabling receipt of user-dependent data;

computer program code wherein access is at least provided through a <u>mobile</u> communications eellular-type provider by said medium for enabling storage of user-dependent data;

computer program code wherein access is at least provided through a <u>mobile</u> <u>communications</u> <u>cellular type</u> provider by said medium for enabling receipt of an information request;

computer program code wherein access is at least provided through a <u>mobile</u> <u>communications</u> <u>eellular-type</u> provider by said medium for enabling detection of the information request requires user-dependent data;

computer program code wherein access is at least provided through a <u>mobile</u> <u>communications</u> <u>eellular-type</u> provider by said medium for receiving location dependent information by at least one secure location server;

computer program code wherein access is at least provided through a <u>mobile</u> communications cellular-type provider by said medium for formatting a the response according to location dependent information;

computer program code wherein access is at least provided through a <u>mobile</u> <u>communications</u> <u>eellular-type</u> provider by said medium for enabling receipt of the user-dependent data; and

ATTORNEY DOCKET NO. 12694RR (NORTH 2007000)

computer program code wherein access is at least provided through a <u>mobile</u> <u>communications</u> <u>eellular-type</u> provider by said medium for enabling submission of the information request; <u>and</u> [[.]]

computer program code wherein access is at least provided through a mobile communications provider by said medium for utilizing an alternative connection to at least one server if the information request does not require user-dependent information.
